Summary

I am a Software Engineer who has experience designing and creating responsive designs and apps for a wide range of websites, portfolios, and site clones. I am talented in both coding and design and have a solid understanding of UX and user psychology. In addition to my technical knowledge, I am a functional programmer who is fluent in a variety of programming languages, including C, C++, Python, and Java.

Furthermore, I am passionate about technical writing, which allows me to successfully express complicated concepts to both technical and non-technical audiences. I thrive in creating clear and concise documentation, tutorials, and guides to help people understand and use software systems. My interest in technical writing compliments my talents as a software engineer, allowing me to bridge the gap between developers and end users.
